

HOW IT WORKS!

We designed a modular work deck that rolls a full bundle of material back and forth so you can build & install 18' picks of flat roofs to full vertical walls **WITHOUT EVER LIFTING OR CARRYING A PANEL BY HAND!**

MODULARITY IS THE KEY TO WORKMANSHIP, and key to our process. Roll-formed panels are precision made through the roll-forming process, which we used to our advantage when developing this system. Each panel is held to module with our interchangeable cap and block profiles, made specifically for the type of panel you are installing.

Our Lifting frame is designed to a .06" vertical deflection, therefore when panels are lifted into place, screw lines are straight as an arrow.

ABOUT

PANELCLAD

BETTER, FASTER, SAFER.

The industrialization of construction is among us. There aren't enough skilled workers to keep up with demand, forcing contractors to work short-handed, and get less done per year. **Material handling accounts up to 40% of labor costs** in construction. Our solution is to reduce non-value added labor by developing equipment and processes that maximize your time in the field.

Our equipment is a fusion of material handling & modular construction principles, reducing non-value added labor, and creating streamlined installation methods giving you the ability to **produce more work with less input cost.**

Standardizing procedures creates better workmanship and improves safety on every job site as well, **making every crew better, faster, and safer.**

It's time to **GET MORE DONE WITH LESS RESOURCES**. Visit www.panelclad.us for more information on the Panelizer system, and other ground breaking innovations developed for erectors, by erectors.

PANELCLAD

Panelized Cladding Systems

THE PANELIZER SYSTEM

ASME-BTH & ASME 30.20 COMPLIANT
OSHA COMPLIANT INSTALLATION METHOD
US PATENT 10,465,393

THE PANELIZER SYSTEM

OUR CARTS SUPPORT A FULL BUNDLE OF MATERIAL AT A COMFORTABLE HEIGHT SO PANELS MAY BE PREPPED & SHOOK OUT ON OUR MODULAR WORK DECK.

THE PANELS REST BETWEEN A FELT LINED CAP & RUBBER BLOCK PROFILE SPECIFIC TO YOUR PANEL, WHICH PREVENT ANY ABRASIONS TO THE PANEL FINISH.

ADD SPREADER BEAMS TO CREATE A SINGLE PICK PLATFORM TO QUICKLY RELOCATE TO THE LEADING EDGE.

THE PANELIZER SYSTEM HAS PERFECTED THE PROCESS OF INSTALLING WALLS, ESPECIALLY HARD TO REACH LOCATIONS, STACK JOINTS, & BUILDINGS WITH LINER PANELS.

OUR DESIGN ALLOWS FOR QUICK SETUP ON SITE, AND CAN BE EASILY SHIPPED TO YOUR NEXT PROJECT.

ADD EXTENSION ARMS FOR INSTALLING ROOF PANELS UP TO 40'-0" LONG.
